

SHRAVAN KUMAR T

Senior Cloud Platform Engineer | Principal-Track

Ohio, USA | 802-566-0110 | shravant.devops@gmail.com | linkedin.com/in/shravant

PROFESSIONAL SUMMARY

Senior Cloud Platform Engineer with 10+ years across AWS, Azure, and GCP, pursuing Staff/Principal Platform Engineering roles. Primary technical owner of a multi-account AWS governance platform supporting higher-education customer environments, personally handling 950+ account lifecycle operations and AWS region enablement across 11 regions. Track record of architecting account lifecycle automation, cutting cloud spend by tens of thousands of dollars per month, and leading cross-team infrastructure initiatives without requiring management escalation. Deep expertise in AWS Control Tower, infrastructure-as-code, Kubernetes platforms, security/compliance automation, and GenAI/ML infrastructure delivery.

Target Roles: Staff / Principal Cloud Platform Engineer, Senior Platform Engineer, Senior Infrastructure Engineer (AWS)

CORE TECHNOLOGIES

Cloud Platforms: AWS, Azure, GCP

AWS Services: Organizations, Control Tower, Account Factory, IAM, Lambda, ECS, EKS, EC2, S3, CloudFormation, AWS Config, CloudTrail, VPC, Route 53, Security Hub, GuardDuty, Macie, AWS Backup, KMS, StackSets

IaC & Automation: Terraform, CloudFormation, AWS CDK, Ansible, Python, Bash, PowerShell

CI/CD & SCM: Jenkins, GitHub, Bitbucket, Azure DevOps, AWS CodePipeline

Containers & Orchestration: Docker, Kubernetes, ECS, EKS, Fargate, AKS

Observability: Splunk, Datadog, CloudWatch, Prometheus, Grafana

Data & AI/ML: EMR, Glue, Athena, Redshift, ML pipelines, GenAI platform enablement

OS & Networking: Linux, DNS, Load Balancers, VPN, TCP/IP, VPC/VNet

WORK EXPERIENCE

Senior Cloud DevOps Engineer | Ellucian

Aug 2022 – Present

- Lead AWS region enablement across 11 regions, including recent rollouts such as ca-west-1 and me-central-1 — covering landing zone setup, STS/assume-role configuration, KMS infrastructure, provisioning automation updates, end-to-end validation, and coordination with networking and security — and document reusable runbooks that standardize the process.
- Built and own a self-service AWS account provisioning automation tool, used independently by other engineers across the organization to create new accounts (e.g., onboarding new colleges or additional accounts for existing ones), removing the need to route requests through a manual process.
- Designed and built an MCP server integrated with AWS Control Tower and Account Factory, enabling natural-language queries against account and organization state to support automated investigation during incidents and audits.
- Built a Slack-based self-service access request tool integrated with Okta and AWS IAM Identity Center, allowing engineers to request and receive SSO access to AWS accounts directly from Slack with identity verification built in.
- Re-engineered the account provisioning deployment pipeline, replacing internal container-based tooling with direct Jenkins pipelines using a feature-branch workflow for test environments and a main-branch workflow for production; built supporting automation for cross-account access role deployment, AWS StackSet conflict resolution, and credential refresh for long-running pipelines.
- Authored disaster recovery architecture and target-state design for core account management infrastructure, sequencing the roadmap around an in-flight platform refactor to avoid duplicated effort.
- Serve as primary technical owner of Ellucian's AWS multi-account provisioning and lifecycle platform (AWS Control Tower, Account Factory, and custom automation) supporting higher-education customer environments, personally handling 950+ account creation, remediation, escalation, and decommission operations.
- Reduced recurring cloud monitoring spend by ~\$30K+/month by identifying and eliminating duplicate audit logging across the AWS organization; advise engineering leadership, including direct presentations to the Director, on additional cost optimization opportunities.
- Designed and implemented an automated evidence-collection system using AWS CloudTrail to support PCI compliance audits, and rolled out Amazon Macie with AWS Security Hub integration for sensitive data discovery.
- Drove incident analysis and root-cause remediation for account provisioning failures, translating findings into preventive guardrails and clearer engineering guidance to reduce recurrence.

- Mentor teammates and junior engineers on Control Tower operations, the CI/CD deployment pipeline for provisioning infrastructure into specific accounts, and security practices using AWS guardrails, Trusted Advisor, and AWS Config; lead evaluation of new AWS service adoption in partnership with AWS account teams, running proof-of-concepts to assess fit before rollout.

Cloud DevOps Engineer, Professional Services | Amazon Web Services (AWS)

Mar 2021 – Aug 2022

- Designed and delivered scalable AWS architectures using serverless, container, and data services aligned to enterprise customer requirements.
- Automated infrastructure provisioning using CloudFormation, CDK, and Python/Bash scripting, improving deployment speed and consistency for customer engagements.
- Implemented secure architectures using Security Hub, GuardDuty, WAF, and KMS to meet customer compliance and security standards.
- Supported large-scale data platforms using EMR, Glue, Redshift, Athena, and AWS Batch.
- Assisted customers with designing and piloting containerized workloads on Amazon EKS and AWS Fargate, integrating with CI/CD and observability tooling in proof-of-concept and early-stage environments.
- Delivered customer workshops and proof-of-concept engagements that directly influenced enterprise adoption of AWS best practices.

Cloud Support Engineer | Amazon Web Services (AWS)

Apr 2020 – Mar 2021

- Resolved complex infrastructure and application issues across ECS, EKS, Elastic Beanstalk, networking, and DNS in production customer environments.
- Supported CI/CD, containerized workloads, and serverless architectures for enterprise customers at scale.
- Provided architectural guidance on secure, scalable AWS environments including IAM, WAF, ELB, and CloudTrail auditing.
- Collaborated with internal AWS service teams to troubleshoot edge cases, improving service reliability for the broader customer base.

Cloud Security Engineer II | Comcast Corporate

Sep 2019 – Apr 2020

- Worked with AKS-based Kubernetes workloads, integrating them with Azure DevOps pipelines and monitoring tools as part of a broader cloud security and platform team.
- Implemented enterprise security controls including Azure AD, SAML, and TLS certificate management across compliance-driven environments.
- Designed monitoring solutions using Azure Monitor, Datadog, Prometheus, and Grafana.
- Standardized CI/CD practices using Azure DevOps, improving deployment consistency across teams.

DevOps Network Engineer / Build Manager | Sentry Insurance

Jan 2019 – Sep 2019

- Managed CI/CD pipelines using Jenkins across Azure and GCP environments.
- Automated infrastructure and deployments using Terraform, Docker, Kubernetes, Python, and Bash.
- Designed cloud networking and disaster recovery solutions for high-availability systems.

Cloud Security Engineer | Kohl's Corporation

Sep 2017 – Jan 2019

- Implemented cloud security solutions using Vault, Splunk, AquaSec, and native AWS/Azure security tooling, integrating controls into CI/CD pipelines to enforce secure infrastructure deployments.
- Monitored security posture using AWS Security Hub and Azure Security Center, supporting vulnerability management and incident response for cloud workloads.

DevOps Cloud Engineer | Econtenti Inc

Jan 2016 – Sep 2017

- Supported AWS infrastructure including EC2, RDS, VPC, and core networking components, troubleshooting performance and availability issues in production.
- Automated infrastructure provisioning using CloudFormation and Terraform, improving consistency and reducing manual configuration.

CERTIFICATIONS

- AWS Certified Solutions Architect – Professional
- AWS Certified Solutions Architect – Associate
- NVIDIA AI Infrastructure & Operations Fundamentals

EDUCATION

Master of Science — University of New Haven, Connecticut, USA
